*Serious drought.
Help save water!*

November 30, 2015

Ms. Diane Boyer-Vine
Legislative Counsel
State Capitol, Room 3021
Sacramento, CA 95814

Mr. Daniel Alvarez
Secretary of the Senate
State Capitol, Room 3044
Sacramento, CA 95814

Mr. E. Dotson Wilson
Chief Clerk of the Assembly
State Capitol, Room 3196
Sacramento, CA 95814

Dear Ms. Boyer-Vine, Messers. Alvarez and Wilson:

I am pleased to transmit the California Department of Transportation's (Caltrans) report entitled "2014 Coastal Anadromous Fish Passage Assessment and Remediation Progress Report" prepared pursuant to California Streets and Highway Code Section 156, (Senate Bill 857, Kuehl Chapter 589, Statutes of 2005).

Although the report shows only three completed projects for last year, major efforts are ongoing. These efforts include: strategically planning for infrastructure and recovery efforts; aligning transportation needs and barrier remediation funding; standardizing design solutions for common types of barriers; streamlining the environmental review and project delivery process for fish passage remediation projects; and finding a way to allow for fish passage remediation projects to result in credits/value as Advance Mitigation Projects.

These efforts will continue to yield progress towards funding a number of high priority locations. Caltrans is committed to finding funding options for priority remediation locations with a transportation nexus and to partner with others to fund and deliver these projects.

Ms. Boyer-Vine, Messers. Alvarez and Wilson
November 30, 2015
Page 2

Caltrans is also now a member of the California Fish Passage Forum, as a signatory of the new Memorandum of Understanding. We look forward to partnering with the Forum to improve the implementation of projects and remediate barriers to fish passage on the State Highway System.

Distribution of this report to the Legislature has been made by Caltrans pursuant to California Government Code Section 9795. This report can be found at <http://www.dot.ca.gov/reports-legislature.htm>.

Sincerely,

MALCOLM DOUGHERTY
Director

Executive Summary

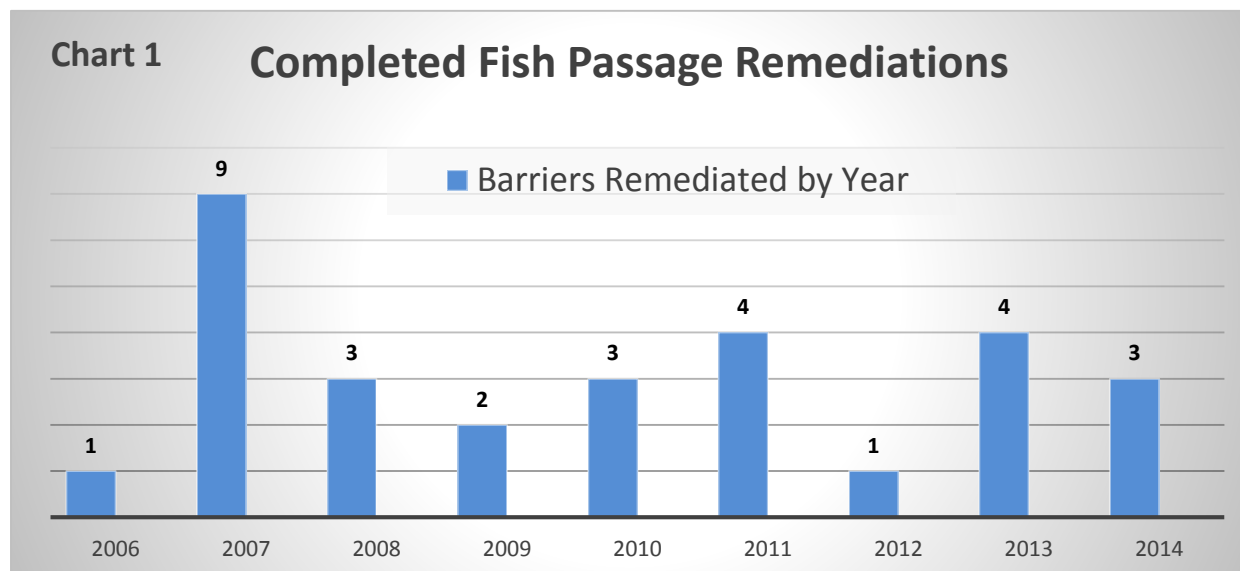

2014 Fish Passage Program Accomplishments

- Completed Fish Barrier Remediations = **3 Locations**
- Completed Fish Passage Assessments = **1 location**
- Active Fish Passage Remediation Projects (programmed) = **24 projects**
- Priority Fish Passage Barriers (future program) = **48 locations**

Quality Assurance Review and New Assessments

In coordination with the California Department of Fish and Wildlife (CDFW), the California Department of Transportation (Caltrans) continues to assess the Passage Assessment Database (PAD) for quality assurance review (QA/QC) of state highway locations. The purpose of the QA/QC is to improve and refine data for existing and new locations, which will help to inform future assessment needs, help to determine staff and funding needs to develop and deliver fish passage remediation projects, and help to inform project priorities for recovery decisions. Completed locations have gone through the QA/QC process as well. Two additional locations have been added to the Completed list, which have not previously been reported, and 5 locations have been removed, due to continued partial barrier status, and duplicate or inaccurate information that has now been updated.

Chart 1 below, **Completed Fish Passage Remediations**, lists the 30 fish passage remediation projects by the Year which they were completed.

Based on the PAD QA/QC, additional assessments were funded in 2014, to survey identified data gaps within San Mateo, Marin, Santa Cruz, Mendocino, Humboldt and Trinity Counties.

This information was recently incorporated into the PAD and will be included in the report to legislature for the 2015 Calendar year (Oct 2016).

The PAD also tracks resident fish, such as Modoc sucker and Lahonton cutthroat trout. In the 2013 report to Legislature, resident fish species were not excluded from the estimate of known barriers. Since this report is specific to anadromous fish, it has been updated to exclude non anadromous barriers, thus reducing the currently known barriers to anadromous species on the State Highway System by approximately 40 locations.

As new assessments are completed, barriers are remediated, and existing information is further refined in the PAD, the relative number of barrier locations and associated priorities will be updated to reflect the best available science and prioritization information.

Prioritization – Criteria and Partnering with CDFW

Caltrans and CDFW coordinate to determine the combined priority list of fish passage barriers on the state highway system. Once barrier locations have been assessed and identified, priorities are assigned, based on the relative habitat value at each location. The habitat value of each location is defined by the presence (or historic presence) and diversity of anadromous species, suitable upstream habitat quality and quantity and the localized knowledge of expert fisheries and hydraulic professionals.

Each parameter for prioritization criteria is necessary to understand and compare the recovery opportunities at individual locations. Any one parameter alone does not relay the significance of benefits for multiple species or translate into water availability during low flow, nor does it demonstrate the quality of habitat for rearing and migrating anadromous fish.

The drought has posed additional challenges to anadromous fish migration and the recovery of listed salmonid species. State and Federal partner agencies are working to identify stretches of watersheds that are likely to provide cool water during the late summer and early fall, in order to sustain salmon populations.

Partnering – Internal

Towards the end goal of improving fish passage remediation through project delivery and internal processes, Caltrans is working to align internal project delivery stakeholders.

The following internal alignment efforts are currently underway;

- Define each division's roles and responsibilities, related to improving fish passage planning, development and implementation of projects.
- Work with districts to identify opportunities to incorporate the updated list of 48 high priority fish passage locations into existing or future funded projects.
- Ensure that all identified fish passage barriers (culverts and bridges) have current inspections to determine if there are any overlapping transportation deficiencies.

- Work with the National Marine Fisheries Service (NMFS) and CDFW engineers to develop standard design solutions for the varied state highway fish barrier types (e.g. culvert replacement, new bridges, weirs), in order to meet species migration needs and to achieve design and approval efficiencies.

Partnering – External

Caltrans and NMFS finalized a Programmatic Biological Opinion (PBO) in October 2013, with the primary intent of streamlining fish passage projects. The geographic scope of the PBO is from the Oregon border to Santa Cruz County and is consistent with the range of Central California Coast Coho salmon, which are endangered in California. Caltrans and NOAA continue to work together to improve the efficiency of fish passage remediation projects. In July 2015, Caltrans and NOAA executed a new interagency agreement, which includes a Caltrans-funded fish passage engineer position. This engineer will work under the direction of NOAA, with a primary focus on Caltrans fish passage locations. The engineer will assist Caltrans in determining appropriate solutions to achieve efficiencies in fish passage design approvals.

In discussions with CDFW, management has conveyed a continued interest in working with Caltrans to streamline permitting efforts for routine activities, including fish passage. In September of 2015, Caltrans and CDFW executed a new interagency agreement. The updated agreement now includes a Caltrans-funded fish passage engineer position. This engineer will work under the direction of CDFW, with a primary focus on Caltrans fish passage locations. The engineer will assist Caltrans in determining appropriate solutions to achieve efficiencies in fish passage design approvals.

Caltrans continues to participate in the California Fish Passage Forum (Forum). The Forum is a collaborative group that was established in 1999 by the California Natural Resources Agency to facilitate coordination of state, local and federal partners, toward the end goal of restoring anadromous fish (salmon and steelhead) populations to naturally sustainable levels. Fish passage barriers are recognized as a major threat to anadromous fish in California and their removal or modification has the potential to yield the greatest cost-efficiency for short-term restoration activities. Based on this recognition, a primary objective of the Forum is to coordinate fish passage remediation activities in California.

The new Forum Memorandum of Understanding (MOU) is in the process of being renewed and signed by the directors of all Forum partners, including Caltrans. The Caltrans Director's approval provides a firm foundation for all partners of the Forum to work toward efficiencies and help to facilitate fish passage project delivery.

Purpose of Report

The purpose of this report is to provide fish passage assessment and remediation information for locations which Caltrans is responsible. This is in accordance with Article 3.5 of Chapter 1 of Division 1 of the Streets and Highways Code, SB 857 (Kuehl, Chapter 589 and Statue of 2005). This report updates Caltrans' progress and describes assessment and remediation activities between January 1 and December 31, 2014. In California, salmon and steelhead are protected under the Federal Endangered Species Act (FESA) and the California Endangered Species Act (CESA), as shown in the **Species Listing Status** below.

Species Listing Status - State and Federal Anadromous Species Listing

Species	Range	State/Federal Listing	Caltrans Districts with identified Barriers to species Habitat
Coho	Oregon to Northern CA coast Oregon (N. Punta Gorda)	Threatened	District 1 (Eureka), District 2 (Redding)
Coho	Central CA coast (S. Punta Gorda to Monterey Bay)	Endangered	District 1 (Eureka), District 4 (Oakland)
Chinook	California Coastal – Klamath River to Russian River	Threatened	District 1 (Eureka), District 4 (Oakland)
Chinook	Central Valley Spring – Sacramento & Feather River	Threatened	District 2 (Redding), District 3 (Marysville) ¹
Chinook	Sacramento River Winter – Sac River & tributaries	Endangered	District 2 (Redding), District 3 (Marysville)
Steelhead	Northern CA Coastal – Redwood Creek to Gualala River	Threatened	District 1 (Eureka), District 4 (Oakland)
Steelhead	CA Central Valley – Sacramento, San Joaquin Rivers & tributaries	Threatened	District 2 (Redding), District 3 (Marysville), District 6 (Fresno), District 10 (Stockton)
Steelhead	Central CA Coast – Russian River to Aptos Creek	Threatened	District 1 (Eureka), District 4 (Oakland), District 5 (San Luis Obispo)
Steelhead	Southern Central CA Coastal – Pajaro River to, but not including, Santa Maria River	Threatened	District 5 (San Luis Obispo)
Steelhead	S. CA Coast – Santa Maria River to U.S./Mexico Border	Endangered	District 5 (San Luis Obispo), District 7 (Los Angeles), District 11 (San Diego), District 12 (Orange)

¹ District 3 (Marysville), District 6 (Fresno) and District 10 (Stockton); are within the ranges of anadromous fish, however there have been no barriers to anadromy identified on the state highway system within those Districts, by either Caltrans or the California Department of Fish and Wildlife.

As noted in the **Species Listing Status** on page 6, three species are currently listed as endangered (red), while all other species noted are currently listed as threatened. In consideration of prioritizing fish barrier locations for funding, endangered species are assigned an increased priority value over species listed as threatened. The increased priority status is commensurate with the need of assisted recovery efforts for endangered species and in alignment with the California Environmental Quality Act. Locations with habitat for multiple listed species are also given increased priority value.

Caltrans District boundaries are shown below.

Performance Measures

Since 2006, Caltrans has been tracking information related to planning, project delivery and implementation of fish passage remediation projects. Currently, there are an estimated 520 barriers to fish on the State Highway System, shown below in Chart 2, **Known Barrier Status by District**, (per PAD).

Project costs

Costs associated with private, local or other state DOT's are not comparable to the costs of fish passage barrier remediations on the California State Highway System for a number of considerations, including;

- As a state, California has some of the highest seismicity (earthquake) standards, which require a foundation analysis, geotechnical investigations (drilling), load bearing analysis and, in general, a more robust substructure (foundation) is required.
- The standard design life-span for structures in California is 70 years. Many of the comparable fish passage remediations on the Oregon and Washington highway system are designed to a 30 year life span.
- Transport trucking, commerce and safety standards require wider shoulders, safety barriers, and other elements, which are not required on private, local and county routes.

After 10 years of delivering fish passage remediation projects, Caltrans staff and resource partners are becoming more efficient and expert at planning and implementation. Through efforts to increase staff expertise, the implementation of standard designs, and continued partnering with regulatory agencies for permitting and other efficiencies, the costs for planning and developing projects will likely continue to be reduced.

Ranges of those costs are in the **Cost Summary - Estimated Cost Ranges** table, below.
Estimated costs include planning, design, permitting, construction and post-construction monitoring for successful implementation of fish passage projects.

Cost Summary - Estimated Cost Ranges (2006 – 2013)

Remediation Category	Range of Costs in millions (average) ²	Percentage of known barrier Locations Estimated for Each Remediation Category ³
Large Bridge defined as <u>Greater</u> than 50-ft	\$3M to \$8.4M (\$5.7 M)	6%, (approx. 31 locations)
Small Bridge defined as <u>Less</u> than 50-ft	\$1.8M to \$2.5M (\$2.15M)	40% (approx. 208 locations)
Large Culvert Replacement of undersized culvert, with <u>80-inch culvert or larger</u> . Some foundation work may be necessary.	\$300K to \$1M (\$650K)	30% (approx. 156 locations)
Retrofit Retrofit existing culvert or structure to accommodate fish passage.	\$450K to \$1.4M (\$925K)	24% (approx. 125 locations)

Upstream Habitat Value

Passage Assessment Database staff at CDFW are working to estimate the extents of anadromous habitat that exist above barriers, by use of Geographical Information Systems (GIS). These estimates require field surveys to verify the extent of habitat. Caltrans is working with CDFW and other partners to verify habitat availability upstream of all locations, to include completed, active and priority locations. When upstream habitat areas are verified by field survey, information will be updated in PAD and used to prioritize current barriers. This information will help to determine the progress of efforts to restore habitat access above barriers on the State Highway System.

² The average estimated costs are reflective of materials, labor and items, at a rate that is consistent with 2006-2013 industry.

³ Percentage of locations is an estimate of the types of solutions for the existing 520 known barriers. This estimate is based on the percentage of solutions in each category, for the 30 locations that have been remediated on the state highway system, since 2006. Information from the Caltrans Project Management database was used to estimate cost ranges and averages.

2014 Completed Fish Passage Remediations

Three fish passage remediation projects were completed in 2014. Table 1, 2014 Completed Fish Passage Remediations, contains information on the locations. Below Table 1 is Figure 1, a map of the locations listed in Table 1.

Table 1 – 2014 Completed Fish Passage Remediation							
Map #	Caltrans District	County	Route	Post Mile	Pad ID #	Stream Name	Project Name

Figure 2 - 2014 Completed Fish Passage Assessments

Active Fish Passage Remediation Projects

Caltrans is currently developing projects to remediate 24 fish passage barrier locations. Table 3 below, Active Fish Passage Remediation Projects, lists the current remediation project locations. Locations are either funded through construction, or partially funded for planning, design or permitting. Figure 3, (page 14), is a map of locations that are listed in Table 3.

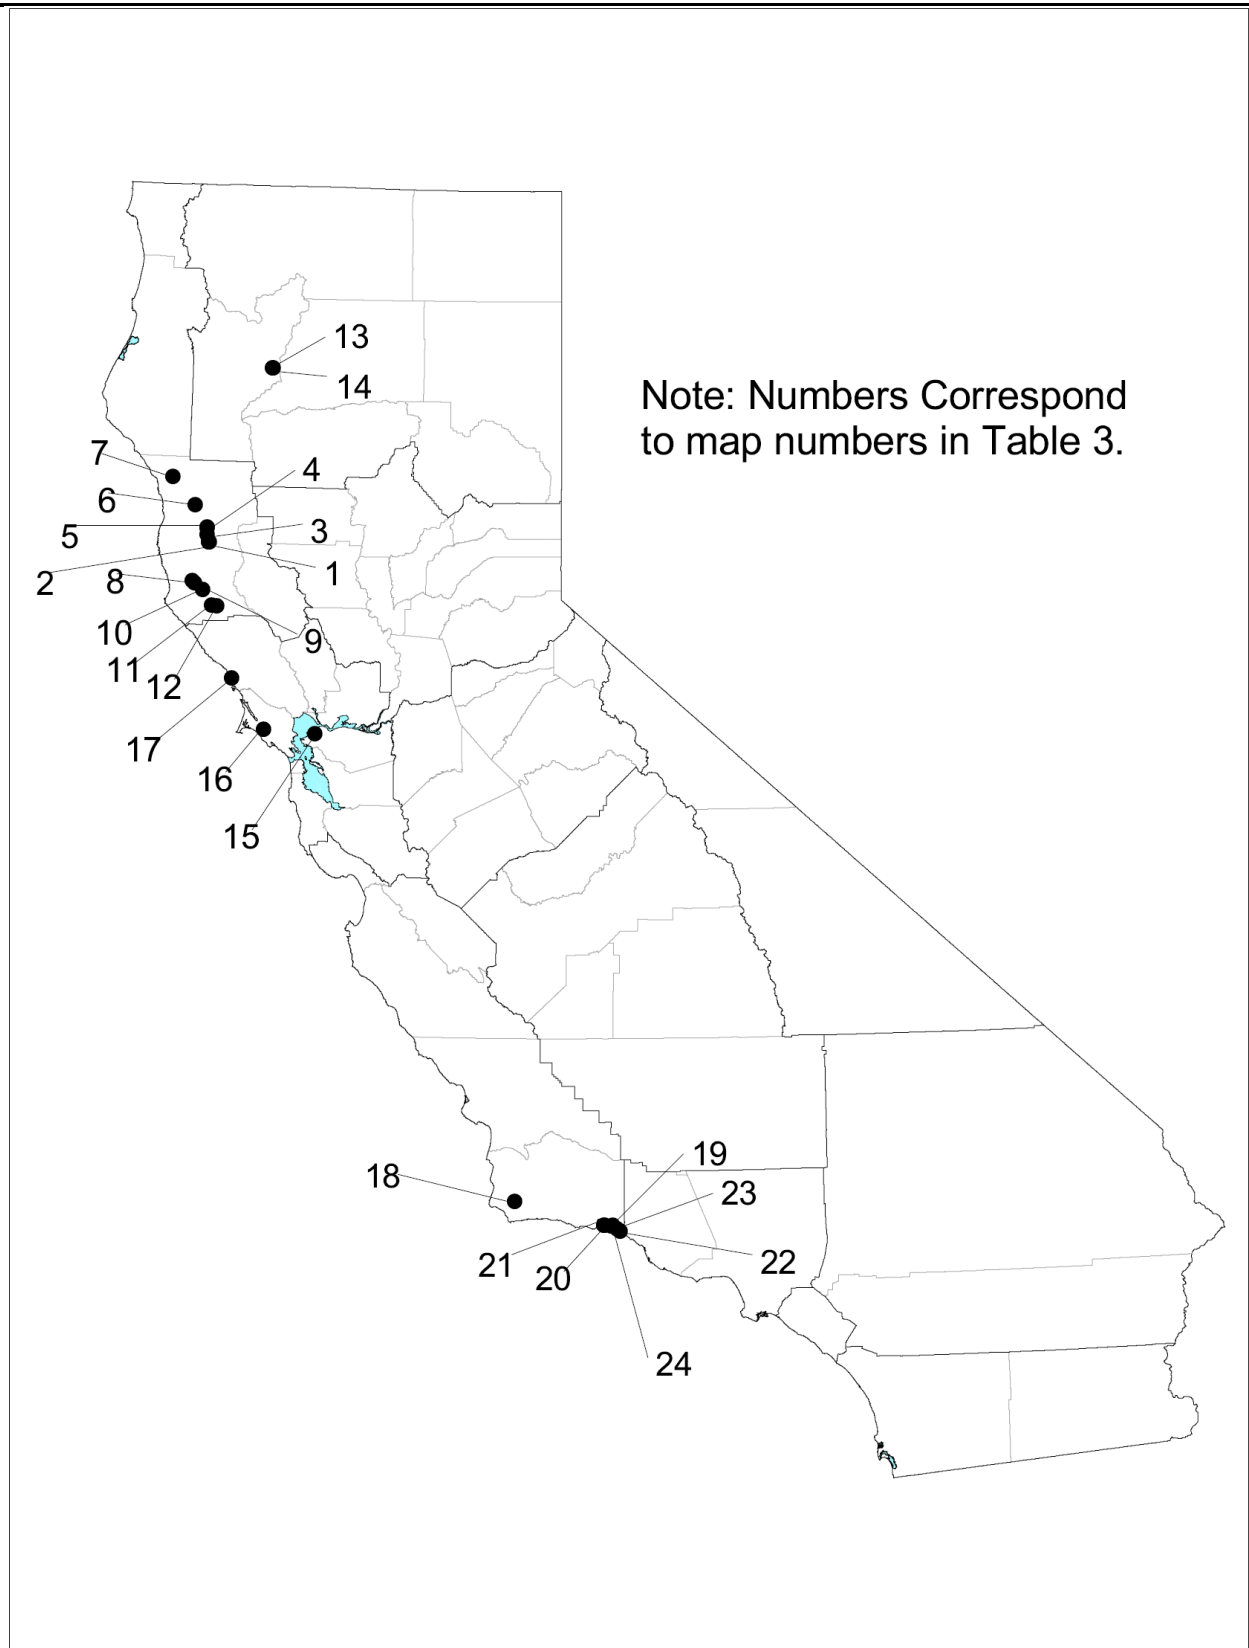

Table 3 – Active Fish Passage Remediation Projects						
Map #	Caltrans District	County – Route – Post Mile	Estimated Year of Completion	PAD ID #	Stream Name	Project Name
1	1	Mendocino – 101 – PM 44.0	2017	713107	Unnamed tributary to Haehl Creek	Willits Bypass

⁵ The Contra Costa Resource Conservation District is the sponsor of this project and has worked with Caltrans through the Encroachment Permit process.

Figure 3 - Active Fish Passage Remediation Projects

Priority Fish Passage Barriers for Remediation

Table 4, Priority Fish Passage Barriers for Remediation, is listed below. All listed crossings have equal priority. The locations that are **bold and underlined** are locations that are new to the 2014 Fish Passage Annual Report. There are 48 locations identified on the priority table.

Table 4 – Priority Fish Passage Barriers for Remediation					
Map #	Caltrans District	County – Route – Post Mile	PAD ID #	Stream Name	Tributary to

<u>48</u>	<u>12</u>	<u>Orange – 5 – PM 11.30</u>	<u>706807</u>	<u>Trabuco Creek</u>	<u>San Juan Creek</u>

⁸ Pismo Creek (District 5) was removed from the priority list. Investigations have determined that the state highway is not a barrier to fish. The identified barrier is actually a Department of Water Resources feature adjacent to the state highway. Mission Creek was added to the list to replace Pismo Creek.

Figure 4 - Priority Fish Passage Barriers for Remediation

Appendix A – Completed Fish Passage Remediations

Senate Bill 857 was enacted into law effective January 1, 2006. Appendix A is a list of all fish passage barriers that have been remediated on the state highway system. The below table lists all anadromous barriers that have been remediated, from the time that SB 857 was enacted, until the end of the reporting period for this report, (December 31, 2014).

Appendix A – Completed Fish Passage Remediations
